

ABSTRACT

A footrest plate 1 comprises a pair of first and second clips to be insertably received into a pair of corresponding first and second mounting holes 18 and 23 formed in a workpiece with leaving a certain distance therebetween. Each of the first and second clips has a rectangular cross-sectional insertion portion insertable into corresponding one of first and second mounting holes each formed in a rectangular shape. The rectangular cross-sectional insertion portion of the first clip 10 includes a pair of longitudinal sides 31 each of which extends in the longitudinal direction of the footrest plate and has a length shorter than that of each longitudinal side 25 of the first mounting hole 23 by a first clearance 26, and a pair of lateral sides 32 each of which extends in the lateral direction perpendicularly to the longitudinal direction of the footrest plate and has a length substantially equal to or slightly shorter than that of each lateral side 29 of the first mounting hole. The rectangular cross-sectional insertion portion of the second clip 9 includes a pair of longitudinal sides 33 each of which extends in the longitudinal direction and has a length substantially equal to or slightly shorter than that of each longitudinal side 25 of the second mounting hole 18, and a pair of lateral sides 34 each of which extends in the lateral direction and has a length shorter than that of each lateral side 29 of the second mounting hole 18 by a second clearance 30.
